

High-Performance Low-Profile Premium Termination

Beautiful Homes

Durable and Stylish Wall Vent

At five paces, you can tell it's well made. Thanks to a low profile and clean lines, you might not even see it at twenty.

Zero
**Airflow
Restriction**

Engineered for a quick, perfect fit for new construction *and* for vent replacement, Dryer Wall Vents exceed all requirements for safe dryer venting. A 22 ga. galvanized steel body that is also powder coated (in brown, tan or white) ensures it will be the last vent a home will ever need.

Durable Dryer Wall Termination — The Last Vent a Home Will Need

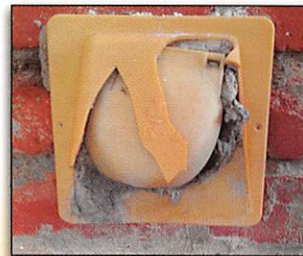

Lasting Beauty

Well-built Aesthetics

Homes are built to last a lifetime. It's a shame when plastic vents fade and crack. Lightweight metal gets crushed in no time. Today, there's a hood made to last longer than a few years. Manufactured from heavy gauge steel that is galvanized *and* powder coated, Dryer Wall Vents are built for the long haul.

The attention to detail that delivers durability is also responsible for the clean lines, smooth finish and low profile that enhance exterior beauty.

Unlike Dryer Wall Vents, plastic vents fade and crack over time.

Venting Never Looked So Good

Stands the Test of Time

Contributes to Exterior Aesthetics

Installs Fast—New or Retrofit

Ease of Installation

Replacing existing vents is a breeze. Key design features make retrofitting easy with a total replacement time as low as four minutes per vent. A 1/16" smaller port slips, quickly, inside the in-wall duct (no worries about obstructions for existing construction). A caulk bead will usually be enough to finish the job, but there are hidden fastener holes for drilling four screws fast. For new construction, without having to remove the old vent, it's even easier.
